

Pollux, aided by Seekers Guild

Pollux is the open campaign kit an SK officer runs herself: modules, a program guide, and a site students return to after.
· UNESCO Youth Hackathon 2026 · English proposal

Team of six students is filled. All members are 18-30. This file is the English proposal text. It is not a live product-ready software claim. The open kit (modules, run-of-show, logistics list, student site) is the claim. Nothing valuable is paywalled.

Team

Equal billing: Pollux (product) and Seekers Guild (community). Role for every row: Team member. Country: Philippines. Size: 6. Affiliation: 4 Polytechnic University of the Philippines, 2 De La Salle University. All members 18-30: Yes. Ages on 16 Aug 2026.

#	Full name	Age	Role	Affiliation	Country	Gender
1	Carlos Jerico Dela Torre	21	Team member	Polytechnic University of the Philippines	Philippines	Male
2	Gerald Berongoy	21	Team member	Polytechnic University of the Philippines	Philippines	Male
3	Rhandie Jr. Sales	21	Team member	Polytechnic University of the Philippines	Philippines	Male
4	Aidan Tiu	21	Team member	Polytechnic University of the Philippines	Philippines	Male
5	Melanie Dotollo	20	Team member	De La Salle University	Philippines	Female
6	Caroline Joyce Asanion	20	Team member	De La Salle University	Philippines	Female

All members 18-30: Yes

Tracks and format

Tracks: Community Impact. Youth Engagement. AI and MIL.

Format (categories): B Applications / Websites, E Educational toolkits, G Community-based interventions. If the portal allows only one box, tick B. Never tick A Games.

Problem statement

Saturday outreach is on the calendar. Mia has a Page and a mandate, and a blank morning: no agenda, no handouts, no link students keep after the tarps come down. A Facebook event is an empty room. A paid vendor workshop prices out the desks that need a session this week. Youth desks outside Manila get the same mandate with even less ready material.

UNESCO's MIL programme asks people to think critically, check sources, use media safely, share ethically, and take part in public talk that is fair. In Philippine barangays, that work is often this Saturday slot: SK and LGU youth desks with a room, a weekend, and no kit.

UNESCO notes that 85% of citizens worry about online disinformation, two-thirds of digital content creators do not systematically fact-check before sharing, and 80% of young people use AI tools multiple times a day. Those figures describe the problem climate. They are not an endorsement of Pollux. Fluent AI text makes rumors look official. SK already has the mandate. They lack a campaign they can run this weekend without a vendor.

Objectives

Modest results. A session this Saturday from the kit. Students keep a URL.

1. **Saturday session.** By the next SK Saturday outreach after the officer receives the kit, she runs a 45-minute barangay slot from the six modules and the 3Ds run-of-show. Success: she clocks the modules, uses print if the hall has no signal, and finishes without a paid vendor.
2. **Student URL.** At the end of that slot, attending students receive a student URL they can reopen. Success: they leave with the address written or sent, and the materials stay free.
3. **Team delivery.** Through 16 Aug 2026, this six-person student team keeps the kit, facilitator path, and English proposal ready for the UNESCO portal. Success: the roster is complete, the HTML matches this text, and the founder can upload.

Target audience

Primary: Sangguniang Kabataan and LGU youth desks running barangay outreach and camps, including provinces. Mia, 19, SK information officer, is the named user: she has a phone, a Facebook Page, and no paid tools.

Secondary: students who keep the URL after the session, and young contributors who are not SK officers. Seekers Guild partners with those desks on the same materials, including outside Manila. Guild never speaks for her Page.

Prototype or concept

Pollux is the open campaign kit an SK officer runs herself: modules, a program guide, and a site students return to after.

For SK and LGU youth officers who need an outreach or bootcamp this week and do not know where to start, Pollux is the open campaign kit: teachable modules, a run-of-show, logistics, and a site students can keep using. Unlike a blank Facebook event or a paid vendor workshop. Materials stay free.

They run the session. We pack the bag.

The kit already lives in this repo (docs/outreach-kit/). Six modules in fixed order:

1. **Access the pack.** Know the source: publisher, date, version.
2. **Pause before share.** Think critically before the forward.
3. **Not in pack, not official.** Allowlist as session behavior.
4. **AI does not know.** Fluency is separate from knowledge.
5. **Ethical share or refuse.** A human commits, or refuses.
6. **Act: launch the desk.** Optional later walk. The Saturday session still completes on modules 1-5, print, and the student URL.

Facilitators get a 3Ds run-of-show (Document / Demonstrate / Duplicate) for a 45-minute barangay slot or a half-day camp, plus a logistics list they can tailor. Print packet if 3G dies. After the session, she sends students the URL. Seekers Guild partners with SK and LGU on the same materials, including outside Manila. Nothing valuable is paywalled.

MIL as session behavior. MIL here is what the room practices.

- Think critically: pause before share, practiced in the room.

- Spot fake news: not in the pack means not official, taught as session behavior.
- Know the source: publisher, date, version named on the desk or paper card.
- Use media well: student URL after class; print packet if 3G dies.
- Share ethically: human commit or refuse; the kit does not auto-post.
- Build a better society: SK and LGU run the same free kit; Guild partners beyond major hubs.

Creativity

The kit exists. Six students packed it. Mia still runs the Saturday. That split is the creative move: the officer keeps the mandate and the Page; Pollux packs modules, a clockable run-of-show, logistics, print, and a student URL.

Creativity is operational. The six modules are teachable this week. The 3Ds run-of-show fits a 45-minute barangay slot or a half-day camp. Print holds when the hall has no signal. The student URL outlasts the tarp. Seekers Guild extends the same free materials outside Manila. MIL shows up as practiced room behavior, mapped onto those modules.

Feasibility

The outreach kit lives in this repo: six modules, 45-minute and half-day run-of-show, print packet, student URL. The team of six students ships a facilitator path: open the kit or paper, clock the modules, send students the URL. Paper is an acceptable fallback if the hosted site is not live by video day.

Sustainability

Apache-2.0 code. CC-BY empty templates and kit copy. SK term is one year; a kit they already ran can pass to the next officer. Seekers Guild keeps partnership open when a founder is not in the room. Paid DFY install for cities is later. Modules, program guide, and student access stay free.

Impact and inclusion

Cheap phones and 3G. Print packet when the hall has no signal. Contribution and partnership rungs that work from outside NCR. CLR consent remains a blocker before public launch to minors; contest demo uses 18+ SK / facilitator personas.

A finished Saturday from the kit is a small, checkable result: the officer ran the session, students still have the URL. Youth desks outside the big cities can reuse the same materials. Seekers Guild partners. Guild does not speak for the SK Page.

Jury sentence

Pollux is the open campaign kit SK councils run themselves. Seekers Guild partners with youth desks, especially outside the big cities. Modules, program guide, and student access stay free.

What we will not claim

We will not claim a 45-minute session closes the firehose. We will not claim production-ready software. We will not claim internet-wide fact-checking. We will not claim the official-pack tap (F3) as the product. We will not put Guild on the SK Page. We will not submit this as a game. We will not tick A. We will not ship a companion. We will not paywall the modules, the program guide, or student access.
